

Michael is a tenacious problem solver who enjoys taking on new challenges and generating thoughtful results. He has consistently adapted to new challenges quickly while also becoming a mentor and advocate for his peers. Michael is inspired by the works of industry leaders like Sandi Metz, Jim Weirich and Grace Hopper. For him, mentoring is a two-way street and he strives to give back to the IT industry by mentoring the next generation of developers and ramping up his contributions to Open Source projects.

Professional Experience

10 years in Software Development

8+ years with Ruby

7+ years of Ruby on Rails

rentometer

Apr 2022 - Present

Rentometer is a data analytics company that specializes in providing rental data to landlords and property managers. We are an in-house team of 2 developers that, in collaboration with a Ukrainian mobile and design firm, is able to keep up with larger companies like Zillow.

Senior Ruby on Rails Developer -> Remote

Independently rebuilt and modernized the Company's entire rental data collection. Currently, I am adding new routines for expanding the scope of rental data collection while also improving the reporting and efficiency of the existing collection processes. Previously, I collaborated with the business adding Custom Branding to our Pro Reports and Teams functionality to the app.

THE N2 COMPANY.

May 2021 - Apr 2022

N2 Publishing prints and distributes magazines for Area Directors that franchise with N2. The publications are either industry specific (Real Estate / Medical) or community focused (HOAs). Both the company and Area Directors rely on a suite of home grown software that N2 uses to manage all aspects of the company's printing and binding, revenue tracking, client management, and marketing.

Ruby on Rails Developer -> Remote

The position was offered with the expectation that I would become a team leader on the development team after learning the domain. This dev team was very unique and was co-lead by the Manager of Development for the company and one of the owners of a consulting firm. It was composed of multiple teams of 4-5 developers with an emphasis on collaboration between the company and consulting developers. This consulting firm had rolled their own frontend framework that was built as an alternative to React called Motion[Ⓒ]. Working with this consultancy's framework was my first deep dive into building and maintaining an Open Source project. Even though we were not granted access to the repo, we did a lot of testing and problem solving with the implementation of their framework.

SWITCHBOX

Jul 2019 - May 2021

Switchbox is a software development firm that works as Dev Team for hire to build and deliver software to companies, many of which do not have a development team of their own.

Project Lead: React and Ruby on Rails API -> Remote

Jun 2020 - May 2021

M.U.C.

My Utility Cabinet is the company's SaaS offering for their overall business of being an outsourced Utility Management company. They specialized in servicing businesses with multiple buildings and locations across the globe. On this project I managed other devs as the architect and primary developer responsible for rewriting the Client's proprietary software into a React application backed by a Rails API. I worked closely with stakeholders and product owners from Hong Kong to Germany to ensure the consistency of existing and new functionality with each deployment.

July 2019 - Jun 2020

Ruby on Rails Developer -> Columbus, OH

At Switchbox I worked independently and in collaboration on a variety of projects, ranging from building greenfield proprietary software to maintaining and improving existing applications. A few of the more notable projects I worked on include:

-  **AXE ARCADE** is a project that I enjoy checking in on. It is a great example of a company turning a problem into a revenue stream. A local axe throwing business was dissatisfied with the available SaaS solutions for running their business, so they made one and started licensing it to their competition. It is now called RKd Solutions and has expanded into several industries over the 5 years since I last worked on this project. I collaborated with the project's lead developer in every technical aspect of the first version of this app's development. Even though it has continued to evolve visually, I can still see the foundation of all of the features that we built in the first version.
-  **Responsoft** is an EMT protocol software used on tablets for distributing procedures for treating various medical conditions that EMTs may encounter. It is primarily a Ruby on Rails web application with some embedded React components. I was responsible for building out the drag and drop protocol builder and doing maintenance for this app.

→ PELOTONIA®

Apr 2018 - Jul 2019

Pelotonia is a local cycling charity that to date has raised over \$309 million dollars for cancer research. It was identified as the second largest cycling charity in the country^{CS} during my time with the company.

Lead Developer: Ruby on Rails, Android, iOS -> Columbus, OH

 was my first full-time Ruby on Rails project. I took over the entire tech stack at the mvp stage from Raizlabs before they were acquired by Rightpoint. The app was intended to help with engaging Pelotonia participants by helping them meet their fundraising commitments. I was involved in hiring and training a mobile developer to focus on mobile app enhancements. PULLL raised over \$458,000 in its first year and was the largest single funding source for their fundraising in 2018.

My contributions included:

- Integrating the Rails API with Pelotonia's API for transferring app funds to fundraising accounts
- Added unit, integration and Cucumber tests to add resilience and integrity to the tech stack
- Admin Functionality and configurations for the business
- Swapped out Authorize.Net with Braintree – for PCI SAQ A compliance and PCI certification
- Partner Landing Pages – Dynamic site to showcase the impact of partners on the app community
- Leaderboards – Dynamic page that tracked the funds raised, daily streaks and activities logged.

Bachelors - Computer Information Systems Oct 2016

Web Application Development GPA: 4.0

Affiliations

- Columbus Ruby Brigade 2019 - Present
- Coders Helping Recruiters – Board member and Co-Organizer 2018 - 2020
